

Empowering Your Staff To Become Security Champions

Security Awareness Training

Security Awareness Training

Complete regular Security Awareness Training with your team to keep them up to date on the current threat landscape. Teach them the skills they need to identify threats and mitigate risk.

Password Policy

Password Policy

Implement a solid password policy to ensure your staff use a strong password. This will mean that their passwords are not easily hacked.

Security Incident Response Plan

Security Incident Response Plan

Clearly document your internal policies around managing cyber incidents. This provides your team with a clear plan which they can execute in the event of a cyber incident.

Data Handling Process

Data Handling Process

Implementing and following this process will ensure that even if your data is no longer required, it will be disposed of or archived safely and securely.

Review Your Policies

Review Your Policies

Review your Data Access and Acceptable Use Policies as well as your staff-onboarding process. Make sure everyone knows where to find these and abides by them.

Security Assessment

Security Assessment

Book annual Security Assessments of your systems and policies. This will help you keep on top of current threats and any holes in your defences against cyber-attacks.
